REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

As noted previously in the record, the flat panel display having layout as set forth in claim 37 is not taught or suggested in the prior art. Such a layout is exemplified by Applicant's figure 5, which shows a two-transistor pixel cell, with each transistor having in an active layer source, channel, and drain, and, in addition, a "bias supply layer" (understood as corresponding to the region of the active layer extending from the channel, and to which a voltage, or bias, is applied). The voltage applied to the channel regions discharges hot carriers. The transistors are oriented so that the source, channel, and drain regions extend along a line parallel to the gate line, and the channel and bias supply layer extend along a line parallel to the data or power supply lines. Advantages of such a layout can be seen in the figure; for example, a compact layout is provided, while simultaneously providing for biasing the channel regions.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
